Problem 1

1/1 point (graded)

The concepts of “Service-Oriented Architecture” and “Software as a Service” refer to the idea that:

- ☒ Applications expose their data and functionality through external interfaces. ✔
- ☐ The source code of software must be available to anyone who requests it.
- ☐ It must be possible to replicate software instances on multiple machines.
- ☐ Software is separated into modules or components.

Answer

Correct:
The main idea is that, rather than being implemented as a monolithic piece of software, applications are “services” that provide data and functionality to other software that need them, and that these “services” are accessible over the network.

Problem 2

1/1 point (graded)

When using jQuery AJAX to make a request to a Web API, the function we use is:

- ☐ ajax.getJSON
- ☐ ajax.get
- ☒ \$.getJSON ✔
- ☐ \$.ajax

Answer

Correct:
This function sends an HTTP request to the specified URL and expects a JSON object in return; it then invokes the specified callback function and passes the JSON object to it as an argument.
